

7. Write Shell script to determine the length of the string extract a substring and locate a position of a character in a string

```
#!/bin/bash
```

```
read -p "Enter a string:" str
```

```
if [ -z "$str" ]
```

```
then
```

```
echo "Null String"
```

```
else
```

```
z=`expr "$str" : ".*"`
```

```
echo "String length is $z"
```

```
if [ $z -ge 3 ]
```

```
then
```

```
echo "Substring is:"
```

```
echo `expr "$str" : '.*\(...\)`
```

```
echo "Another Substring is:"
```

```
echo `expr "$str" : '...\(...\).*`
```

```
read -p "Enter the character to be searched:" ch
```

```
res=`expr "$str" : '[^$ch]*$ch`
```

```
if [ $res -ne 0 ]
```

```
then
```

```
echo "Position of character $ch in a string is $res"
```

```
else
```

```
echo "Character $ch does not exist in the string"
```

```
fi
```

```
else
```

```
echo "String length is less than 3"
```

## Output:

Enter a string:

Null String

Enter a string: hello world

String length is 11

Substring is:

orld

Another Substring is:

llo

Enter the character to be searched: e

Position of character e in a string is 2

Enter a string: Hi

String length is 2

String length is less than 3

Enter a string: Unix program

String length is 12

Substring is:

ram

Another Substring is:

ix p

Enter the character to be searched: w

Character w does not exist in the string

Expt. No. .... 7 .....

fi
